

# Do you have a child with FOXP1 syndrome aged 13 or older?

The Seaver Autism Center is studying behavioral and psychiatric features of FOXP1 syndrome in adolescence after puberty onset.

## What's involved?

- This study can be completed remotely through videoconferencing.
- Participants and their caregivers will complete various assessments, including a psychiatric evaluation, an adaptive functioning test, a sensory interview, and behavioral measures.
- Participation is expected to take approximately 5 hours.
