

## AUTISM RESEARCH OPPORTUNITY

### Do you know a teenager on the autism spectrum?

They may benefit from joining an important neuroimaging study at Kessler Foundation.

Scientists are researching how brain connectivity varies between neurotypical and autistic individuals. They use magnetic resonance imaging (MRI) brain scans of kids ages 11 to 18 to evaluate brain function.

Principal Investigator: Helen Genova, PhD.  
Associate Director, Center for Autism Research

If you have any additional questions or if you think your adolescent may be a good candidate to participate in this study, email us directly at [autismresearch@kesslerfoundation.org](mailto:autismresearch@kesslerfoundation.org) or call us at p: 973-324-8453.

\*The neuroimaging study does not include medications, contrast dyes, or injections.

### Who is Eligible?

Adolescents or teenagers between 11 and 18 years old.

Have a diagnosis of autism.

No metal implants or permanent braces (please call us for more details).

**Where:** This is an in-person neuroimaging\* study held at Kessler Foundation located in East Hanover, NJ and West Orange, NJ

**Compensation:** Eligible participants will receive up to \$200 in Visa Gift cards and a CD with a copy of their MRI.
