

Participate in Sensory Autism Research!

Autistic adult participants needed for auditory neuroscience study at Vanderbilt.

Study on the Neuroscience of Sound Sensitivity in Autism

We're looking for **autistic adults between the ages of 18 and 60 years** to help us understand the reasons why some people on the autism spectrum are more sensitive to sound than others.

This research seeks to investigate the ways that the brains of autistic people with more or less sound sensitivity process auditory information differently. **Autistic adults both with AND without sound sensitivity can participate.**

Participants will be asked to:

- Attend two 3–4 hour long appointments at Vanderbilt
- Complete online questionnaires

Appointments will include:

- Clinical interviews
- Hearing and auditory testing
- Psychological testing
- Brainwave recording (EEG)

For more information, contact bahar.keceli-kaysili@vumc.org

Who can participate?

- Adults aged 18–60 years **with or without diagnoses of autism**
- No sound sensitivity required

Where is it located?

- All study visits will take place in the Vanderbilt Bill Wilkerson Center in **Nashville, TN**

Participants will be compensated \$20/hour for their time.
