The Family and Youth Research Network at VCU's STAR Lab is

seeking adolescents aged 13-17 with a diagnosis of Autism Spectrum Disorder to participate in a research study. Adolescents will need a parent to give permission to participate. The parent will also be able to participate if interested.

What will it involve?

Participants will be asked to complete neurocognition computer tasks with eye-tracking, fill out questionnaires, and a genetic saliva sample.

Who is eligible?

Adolescents fluent in spoken and written English, have binocular vision correctable to 20-20, have no gross motor disorder affecting the dominant hand, and can provide informed verbal assent may be eligible to participate.
