

Caregiver-Endorsed Intervention Strategies for the Treatment of Sensory Reactivity Symptoms in Children with Neurodevelopmental Disorders

Help us learn about sensory interventions that have and have not worked for your child
by participating in a brief survey.

Participation in this study is completely voluntary and there are no costs associated with
participation.

STUDY INFORMATION

This anonymous 5-10 minute survey will include questions regarding:

- Your child's basic demographic information
- Your child's sensory preferences (e.g., hyperreactivity, hyporeactivity, sensation seeking)
- Your satisfaction with various sensory interventions your child has received

You may be eligible to take part in this research study, if you:

- Are a caregiver of a child who has been diagnosed with autism or a related neurodevelopmental disorder
- Are available to answer an anonymous 5-10 minute survey

You can learn more about the study and access the survey using this link or the QR code
